

I am a Playmaker.

Snejana Turcu

Senior Data Engineer

WHAT MAKES ME A PLAYMAKER

I don't just build. I redesign.

Replaced Azure Data Factory with a unified Databricks ingestion framework — EDH v2.

I eliminate toil. I create scale.

New sources onboard via config, not code. Modular. Reusable. Scalable by design.

I think ahead. I build foundations.

EDH v2 is the backbone for the self-service data platform — already future-proofed.

ONBOARDING TIME
↓ **Drastically**

MANUAL SETUP
→ **Config-driven**

CI/CD CONSISTENCY
↑ **Improved**

HOW I DEMONSTRATE COMMITMENT

1

EDH v2 delivered

2

DWH auto architected

3

DWH auto in dev

∞

Self-service platform

Deliver the roadmap

I've defined the architecture and roadmap for Data Warehouse automation. I own it — from design to delivery.

Roadmap set · Development started

Multiply impact

Every system I build is designed to scale beyond me — enabling teams, unblocking autonomy, and reducing operational drag.

Governance · Scalability · Autonomy

"I don't wait for the game to come to me - I get involved and make things happen."
